

$$u'' + a u' + b u = f$$

Lösungsstrategie

1) Best. Lsg. der homogenen Gleichung ($f \equiv 0$)

Fall a) Konst. Koeffizienten ($a, b \in \mathbb{R}$)

→ Aufg. A52 Ansatz $e^{\lambda x} = u(x)$
→ charakt. Gleichung

(Verfahren üben!)

(Satz 9.2)

Fall b) Suche eine (spezielle) homogene Lsg ($\neq 0$) und erhalte nach Satz 9.3 die Lösung gesamt heif

2) Aus Satz 9.6 eine Partikularlsg. → Wronski-Determinante $W(x)$

3) Lsg.-gesamtheit in homogene Gleichung

= - " - homogener Fall + Partikularlsg. (inhomogener Fall)

A54 → gew. lin. DGL 2. O. mit konst. Koeffizienten

$$u'' + u = \frac{1}{\sin(x)} \quad x \in (0, \pi)$$

$$u'' + a u' + b u = f \quad a = 0 \quad b = 1 \quad f(x) = \frac{1}{\sin(x)}$$

1) Löse hom. DGL $u'' + u = 0$

$$\rightarrow \text{char. Gl. } \lambda^2 + 1 = 0 \rightarrow \lambda = \pm i$$

reelles Fundamentalsystem $\underbrace{\operatorname{Re}\{e^{ix}\}}_{\cos(x)}, \underbrace{\operatorname{Im}\{e^{ix}\}}_{\sin(x)}$

$$e^{ix} = \cos(x) + i \sin(x) =: u_1(x) =: u_2(x)$$

(2)

\Rightarrow jede Lsg. der hom. Gl. ist von der Form

$$c_1 \cos(x) + c_2 \sin(x), \quad c_1, c_2 \in \mathbb{R}$$

2) Wronskiani - Def.

$$\begin{aligned} W(x) &= u_1(x) u_2'(x) - u_2(x) u_1'(x) \\ &= \cos^2(x) + \sin^2(x) = 1 \neq 0 \end{aligned}$$

Part. Lsg. (Satz 9.6)

$$\begin{aligned} u_0(x) &= u_1(x) \int^x \frac{-f(\xi) u_2(\xi)}{W(\xi)} d\xi + u_2(x) \int^x \frac{+f(\xi) u_1(\xi)}{W(\xi)} d\xi \\ &= \cos(x) \int^x \frac{-\sin(\xi)}{-\sin(\xi)} d\xi + \sin(x) \int^x \underbrace{\frac{\cos \xi}{\sin \xi}}_{\log(\sin(x))'} d\xi \\ &= -x \cos(x) + \sin(x) \log(\sin(x)) \end{aligned}$$

3) Allg. Lsg.

$$\begin{aligned} u(x) &= \underline{c_1 u_1(x)} + \underline{c_2 u_2(x)} + u_0(x) \\ &= c_1 \cos(x) + c_2 \sin(x) + \sin(x) \log(\sin(x)) - x \cos(x) \end{aligned}$$

$$\text{fSG} \quad u' = f\left(\frac{u}{x}\right) \quad (8.14) \quad (3)$$

$$\text{ausatz } v(x) := \frac{u(x)}{x} \rightarrow v'(x) = \frac{u'(x)}{x} - \frac{u(x)}{x^2}$$

$$= \frac{1}{x} \cdot \underbrace{f(v)}_{=u'} - \frac{v}{x}$$

$$= \frac{1}{x} (f(v) - v) \quad (8.15)$$

Separation der Variablen ($f(v) + v$)

$$\frac{v'(x)}{f(v) - v} = \frac{1}{x} \quad \left| \int dx \right.$$

$$\int \frac{v'(x)}{f(v) - v} = \int \frac{dx}{x}$$

$$\underbrace{f(v(x))}_{v'(x)} \quad \Leftrightarrow$$

$$y = v(x) \quad \int \frac{dy}{f(y) - y} = \log(x) + C$$

$$= -\frac{1}{2} \log |1 - 2y^3| + C$$

Verteilen mit der Exponential fkt.

$$\rightarrow \hat{y}(x) = \sqrt[3]{\frac{1}{|1 - 2y^3|}}, \quad \hat{y} > 0$$

$$\Rightarrow \frac{1}{\hat{y}^2 x^2} = |1 - 2y^3| \Rightarrow \pm \frac{1}{\hat{y}^2 x^2} = 1 - 2y^3$$

$$\Rightarrow 2y^3 = 1 \pm \frac{1}{\hat{y}^2 x^2} \Rightarrow y^3 = \frac{1}{2} \left(1 \pm \frac{1}{\hat{y}^2 x^2} \right)$$

In unserem Fall:

$$x^3 + u^3 - 3xu^2 = 0$$

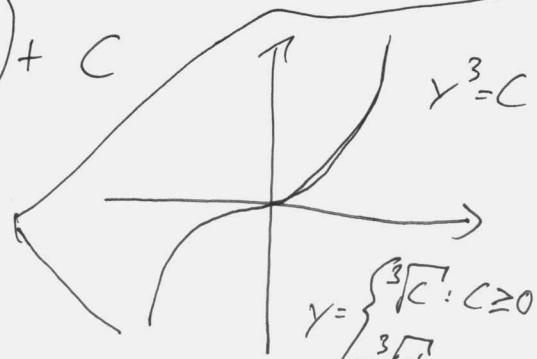

$$\Rightarrow u' = \frac{x^3 + u^3}{3xu^2} = \frac{1}{3} \left(\frac{x^2}{u^2} + \frac{u}{x} \right)$$

$$= f\left(\frac{u}{x}\right) \text{ mit } f(y) := \frac{1}{3} \left(y^{-2} + y \right)$$

Zunächst $\int \frac{dy}{f(y) - y}$

$$= 3 \int \frac{dy}{y^{-2} - 2y} = \frac{3}{-6} \int \frac{(-6y^2)}{1 - 2y^3} dy$$

$$= \log \left(\frac{1}{\sqrt[3]{|1 - 2y^3|}} \right) + C$$

$$y = \begin{cases} \sqrt[3]{C}, & C \geq 0 \\ -\sqrt[3]{|C|}, & C < 0 \end{cases}$$

(4)

$$\Rightarrow y = \sqrt[3]{\frac{1}{2} \left(1 \pm \frac{1}{a^2 x^2} \right)} ; \sqrt[3]{-a} := -\sqrt[3]{a} \quad \text{if } a \geq 0$$

Wegen $y(x) = v(x) = \frac{u(x)}{x}$ erhalten wir mit

$$\mu := \pm \frac{1}{2a^2} \in \mathbb{R}$$

$$u(x) = x \sqrt[3]{\frac{1}{2} + \frac{\mu}{x^2}} = \sqrt[3]{\frac{1}{2} x^3 + \mu x} , \mu \in \mathbb{R}$$

mit obiger Konvention für negative Radikanten

Der Fall $\mu = 0$ entspricht dem Sonderfall $f(v) = v$.

Allg. ist $f(v) = v \Rightarrow v' = 0 \Rightarrow v \equiv \text{const.}$

$$\Rightarrow u(x) = x \cdot c$$

Rechne zur Probe nach

$$\begin{aligned} & x^3 + u^3(x) - 3x u^2(x) u'(x) \\ &= x^3 + u^3(x) - x \frac{d}{dx} u^3(x) = x^3 + \frac{1}{2} x^3 + \mu x - x \left(\frac{3}{2} x^2 + \mu \right) \\ &= x^3 + \frac{1}{2} x^3 + \mu x - \frac{3}{2} x^3 - \mu x = 0 \end{aligned}$$

(5)

A56 a)

$$\int_0^1 \frac{x}{4x^2 + 8x + 13} dx$$
